Pulp

Problem

Problem Variation

Pulp 3 Exporters

- Pulp Exporter (Default Format)

- Available for yum, file, containers, ansible collection
- Facilitates both regular and incremental exports. When creating the exporter user can give it
 - Export directory
 - Repository Version to export
 - Start Version (Optional). Used for incremental exports.
 - Repository Version - Start Version exported
- Copies artifacts to disk and compresses them. (Need at least 2x space.)
- Chunkable
- Users can then import this in another pulp instance.
- Checksums are part of exports and actively checked on the import.
- Artifact structure does not resemble the source feed.
- Upstream and Downstream pulp versions have to match upto x.y (3.39 on both sides for example.)

Pulp Exporter export structure

```
[root@upstream ~]# tree /var/lib/pulp/exports/export-23529/Export-misc-2/  
/var/lib/pulp/exports/export-23529/Export-misc-2/  
├── 1.0  
│   └── 2023-11-08T21-56-02-00-00  
│       ├── export-018bb0ef-6b72-788b-a916-0f85908bfe95-20231108_2156.tar.gz  
│       ├── export-018bb0ef-6b72-788b-a916-0f85908bfe95-20231108_2156-toc.json  
│       └── metadata.json  
  
2 directories, 3 files
```

Pulp 3 Exporters

- Filesystem Exporter (Syncable Format)

- Available for yum, file
- Facilitates both regular and incremental exports. When creating the exporter user can give it
 - Export directory
 - Repository Version to export
 - Start Version (Optional). Used for incremental exports.
 - Repository Version - Start Version exported
- Hardlink artifacts to disk (so not 2x space unless the export directory is in a different partition.)
- Export structure resembles the source feed Yum or File repo
- User can then pull content from this export in a different pulp instance using standard create and sync.
- Tends to be faster than regular export due to lack of compression (but slightly apples and oranges comparison.)
- No extra checksums (yum repo checksums only)

Filesystem export structure

```
[root@upstream ~]# tree /var/lib/pulp/exports/export-23529/Export-SYNCABLE-misc-2/1.0/2023-11-08T21-56-16-00-00/
/var/lib/pulp/exports/export-23529/Export-SYNCABLE-misc-2/1.0/2023-11-08T21-56-16-00-00/
